PATIENT BEDHEAD UNITS

PATIENT BEDHEAD UNITS

PATIENT BEDHEAD UNITS

- ◆ Innovative Design
- ◆ Easy and Quick Installation
- ◆ Wide options of design, color, and dimensions
- ◆ Laminated aluminum composite panels.
- ◆ Easy to clean, antibacterial, hygienic.
- ◆ Robust support system of BHU is ideal for renovation.
- ◆ Prefabricated sockets, outlets, and assemblies with the ward's medical piping and wiring system.

The Schönn bed head unit is perfectly suited for patients' rooms and other departments that require suitable lighting, electricity, telecommunications, and medical gas outlets at each bed. The unit housing is made of extruded aluminum and is powder-coated. Schönn bed head units fully conform to HTM08-03, ISO EN 11197 and IEC EN 60601/1 standards, providing users with the following benefits.

LIGHT

Schönn bedhead units can be equipped with indirect lights for room illumination, direct lighting for illuminating the bed head areas, and a night lamp. Positioning the direct lighting fixtures at a certain angle allows the light to disperse over the patient's head and provide excellent illumination for reading. Positioning of the indirect lighting efficiently disperses light over the wall above the unit. All lights are fitted with high-quality, long-life, environmentally friendly, latest-technology LED strip tubes meeting the highest standards.

DESIGN

The shape of the profile itself is a great leap forward from classic rectangular channels. The electricity and low-power outlets are also available in the most modern designs. The user or designer can choose the length of the units, select a color from the RAL chart, decide on the intensity of the lighting, and choose the number and positioning of separate outlets.

SECURITY

Inside of the unit is divided into several channels. Such a layout allows a separate channel for each energy source (high voltage, low voltage, communications, medical gases), preventing any chance of interference between energy sources.
